Chapter 23 The Evolution of Populations Lecture Outline . Overview: The Smallest Unit of Evolution. One common misconception about evolution is that organisms evolve, in a Darwinian sense, during their lifetimes. Natural selection does act on individuals.

### Chapter 23 - The Evolution of Populations | CourseNotes

Concept 23.1<br />Mutation and sexual reproduction produce the genetic variation that makes evolution possible<br />4<br /> 5. Two processes, mutation and sexual reproduction, produce the variation in gene pools that contributes to differences among individuals<br />5<br />

### OHH5 AP Biology Chapter 23 (Class Presentation)

Chapter 23: The Evolution of Populations . This chapter begins with the idea that we focused on as we closed the last chapter: Individuals do not evolve! Populations evolve. The Overview looks at the work of Peter and Rosemary Grant with Galápagos finches to illustrate this point, and the rest of the chapter examines the change in

### Chapter 23: The Evolution of Populations - Biology Junction

Concept 23.4 Natural selection is the only mechanism that consistently causes adaptive evolution 24. In evolutionary terms, fitness refers only to the ability to leave offspring and contribute to the gene pool of the next generation. It may have nothing to do with being big, or strong, or aggressive. Define relative fitness.
