Here are two examples where we write the VLOOKUP function a little differently. They're both using similar data sets but since we're pulling information from two separate columns, 3 and 2, we make that distinction at the end of the formula—the first one grabs the position of the person in A8 (Finley) while the second formula returns the name that matches the employee number in A9 (819868).

How to Use the VLOOKUP Function in Excel
