Just like a body, wireless networks are made of cells. If you're located within range of a particular cell site, congrats, you're in the network. As you move about your life, nearing one cell site to the next, this network keeps you connected. Next.

### How Wireless Works

A wireless network-connected laptop computer sends and receives packets of complex data, allowing it to talk to other computers on the network. A cellular phone system routes packets of telecommunications information simultaneously on many channels in vast quantities.

### How Does Wireless Technology Work

The Basics. Wireless networks operate using radio frequency ( RF ) technology, a frequency within the electromagnetic spectrum associated with radio wave propagation. When an RF current is supplied to an antenna, an electromagnetic field is created that then is able to propagate through space. The cornerstone of a wireless network is a device known as an access point ( AP ).
