A lower burden of chronic disease will, in turn, enable greater healthcare resources for the poor. More elaborate food labeling systems, educational campaigns, and taxes on processed foods that depend on fat, sugar, and salt contents, can improve population health and economic productivity in developing countries.

6 ways to improve child nutrition in the developing world ...

Better data is needed to define the problem of malnutrition, diagnose its root causes, design interventions, and track progress. In particular, many countries lack the data they need to measure progress against global nutrition targets. We are developing new tools and platforms to enable timely collection of data and improve its analysis and use.
